Hello Syed Muhammad,

Congratulations on successfully registering content with Crossref - (**Bacha Khan College of Dentistry)** now has at least one persistent DOI registered. As you'll be able to keep the URL that the DOI resolves to current, you've ensured that anyone using the DOI will always be able to find your work, even if it moves to a different website in the future. Plus, the other thousands of Crossref members are also obligated to use your DOI when they reference your work, ensuring that it remains a persistent part of the scholarly ecosystem.

But it's more than that - metadata about your content is now available to hundreds of organizations and thousands of users through our open APIs, increasing your discoverability and reach.

How to verify your registration

Here's how to verify your registration and understand any error messages that you received.

See what you're sharing with the scholarly ecosystem

You can get a glimpse of the metadata that's now available in our APIs by taking a look at your Participation Report. Simply type in the name of your member organization (**Bacha Khan College of Dentistry)** to see how many of the key metadata elements you have included in your submission

We recommend including as much metadata as possible about each record - the more metadata you include, the more connections can be made by others who will find your content.

Make sure you're displaying your DOIs properly

Now that you have your first DOI registered, it's important to display it correctly on the landing page for that work. The DOI needs to be displayed as a hyperlink so that users can copy and paste it directly into a browser. You can find out more about DOI Display Guidelines on our website. Please read through this carefully, and make sure that you are displaying your new DOIs properly. Get in contact if you have any queries or concerns about this.

Register your backfile records at a discounted rate

As a member, you are obligated to register DOIs for any content that you publish going forward. But it's also good to ensure that you have DOI metadata records for your older content too - this will ensure that information about your older articles are shared with the global community through our APIs. You can register older, backfile content with us at a discounted rate - for example, the cost to register a backfile journal article is US$0.15, compared to US$1 for a current article. You can find out more information here.

All the best
